2 ANALYZING

3 DESIGNING

DESIGN THINKING
PROTOTYPING

NAME OF SOFTWARE LOOK

This is the space of intentionality in design.
We put ourselves in the minds of our users and create a design that follows the rules of strategy, logic and appeal. You can click here to see your prototype. Feel free to share your design(s) with your investors.

BUILDING

EXPANDING YOUR CO, INC.

Chisel Tech developers write in clean code which means each method, object, class and variable is neatly written and detailed with notes. When we author a project, most developers can understand the entire application execution flow & we write in a way that makes our code easily editable.

4 CODING

5 TESTING
QUALITY ASSURANCE
SETTING THE STANDARD

We implement three stages of testing. We test our design prototype to ensure the workflow makes sense. We perform user testing to validate your business objectives and design. And lastly, we test the code to ensure that everything works and functions as it should.

BRANDING. TECH SUPPORT. AUDITING.

HOW TO SUSTAIN

This is where your Analyst, Marketer, and Developer come together to develop a plan for your company's sustainability. Click here to see the mapping of your company's trajectory, auditng plan & enhancement plan for future versions.
